

TiTrATE Decision Tree: Temporal & Symptomatic Classification

TiTrATE Classification Principles

1. Temporal Pattern: Onset (sudden/acute/gradual) + Duration (seconds/minutes/hours/days/chronic)
2. Symptomatic Pattern: Type (vertigo/dizziness/lightheadedness) + Triggers (positional/spontaneous)
3. Associated Features: Red flags (focal signs) + Risk factors (age, CVD, diabetes)
4. Progression: Improving/stable/worsening + Previous episodes
5. Constraint Satisfaction: All clinical rules must be satisfied before classification
