

Uncertainty-first decision framing (screening / routing)

Symptom report + context
(missing / ambiguous / conflicting)

Uncertainty profiling $u(x)$
(information / diagnostic overlap / policy)
Decision control signal

Triage safety gate
(red flags / unstable vitals)

TiTrATE patterning
(timing / triggers / targeted exam)

Routing decision groups (G1–G5)

+ care pathway + rationale

Traceable and auditable, not diagnosis

XAI artefacts

(rule path, uncertainty flags, explanations, logs)

Governance and monitoring

(safety metrics, audits, regression tests)
